

On the Subject of Numbered Indicators

Oh look! It's just another widget.

- This indicator has numbers instead of letters.
- Use the following to convert the indicator to letters:
- The first position is the first digit + 20.
- The second position is the second digit + 10.
- The third position is the third digit.
- Add or subtract 26 to the number until it is in the range (1 - 26).
- Convert the numbers to its corresponding alphabetical position.
- The backing can also be different colors.
- The colors are: Aqua, Black, Blue, Brown, Gray, Green, Lavender, Lime, Magenta, Maroon, Mint, Orange, Pink, Purple, Red, Sky, Tan, Teal, White, and Yellow.
